

INDUSTRIAL INTERNET of THINGS TRAINING KIT

Model Number : GOTT-IoT-5087

INTRODUCTION

Industries are entering a new era as the IoT provides devices worldwide containing embedded technology with seamless connection, management, and secure interaction. Industrial IoT (IIOT) describes machine-to-machine (M2M) communications wherein machines interact and communicate with other machines, objects, environments and infrastructures. As a result of these communications, huge volumes of data are intelligently generated, with the data processed and analyzed, resulting in meaningful and timely action for management and control. The increasing trend towards Industrial IoT is transforming industries, increasing efficiency and optimizing operations.

ADLINK uses the robust hardware and software stack of Intel® Gateway Solutions for the Internet of Things to empower industries with connection of legacy infrastructure. Accordingly, companies can collect and analyze data to enable greater operational efficiency, big data solutions, and new services for business transformation .

ADLINK's advanced IoT offers a full range of solutions covering devices, gateways, and network infrastructure, creating application-ready intelligent IoT solutions and services for strategic development of IoT innovations.

Wind River® Intelligent Device Platform XT is used to customizable middleware development environment that provides security, connectivity, rich networking options, and device management. It Simplifies the development, integration, and deployment of gateways for the Internet of Things.
